experience

capital one

lead engineer   jul '23-present
> centralized customer credit adjustment tooling, saving customer service representatives hours of processing

> orchestrated several routinely scheduled ETLs and user interfaces that unify data from across the organization for 75,000 client relations

senior engineer   jul '19 - jul '23
> architected the CMS and CRM system that organizes and automates 200,000 brand and product placements from thousands of clients

> engineered the Capital One Shopping homepage personalized feed with features like lazy loading and A/B testing

> created an asset management portal that reduced the client asset retrieval process from days to minutes

software engineer   nov '18 - jul '19
> developed an internal style and component library to be used by over a dozen applications

> standardized hundreds of email campaigns with component-level templating, complete with dark mode optimization and an isolated testing environment

> migrated several existing legacy applications to React with hooks

viewlift

software engineer   nov '16 - nov '18
> migrated legacy jQuery/Backbone codebase to React/Redux with enhancements like server-side rendering

> produced a drag-and-drop content management system for clients to maintain their web, mobile, and TV apps from a single source

> constructed a reusable library of React components that shaved 30% of render code off of several repositories
